SUBJECT INDEX VOLUME 25, 1995

1, 4-benzodiazepinooxazole derivative, 401, 403
2', 3'-cyclic AMP synthesis, 47, 51
5'-ADP synthesis, 351, 353, 358, 359, 361
5'-AMP adsorption, 351, 353, 354, 360, 368
abiogenesis, 518
accuracy in evolution, 219, 225
acetolactate, 100, 106, 107
adenine, 61, 83–96
  binding to clay, 72, 73
  prebiotic role, 83, 84
adenosine, 47
adsorption, 375, 376, 379, 387, 388, 391, 443–454
alanine, 111–116
aldehydes, 162, 171
aldolization, 311, 312, 317, 318, 321, 323, 327, 328
  mineral-catalysed, 323
alkanes, 417, 420, 422–424
amination, 398
amino acids, 99, 111, 112, 163, 443–445, 447, 448, 450, 453, 454
  adsorption, 375, 379, 381
  aqueous phase synthesis, 395, 396
    non-enzyme synthesis, 395
  biosynthesis, 99, 100, 104, 105, 109
  branched-chain, 99, 100, 109
  decomposition, 112, 114, 116
  evolution, 99, 104
  stability, 112, 115, 116, 198
  substitutions, 271, 275
aminoacyl-tRNA synthetases, 265–269, 565, 566
  evolution of, 265, 269
aminoimidazole carboxamide (AICN), 61, 78
ammonia, 531, 537
ammonium zinc ferrocyanide, 534, 536
amphiphilic molecules, 21, 22, 27, 28, 43
  bilayer, 21, 24, 25, 27, 28, 30, 38
amplification of chirality, 539
ancestral sequences, 551, 552, 559
anhydrobiotic organisms, 277
annealing, 5, 6
antique evolutionary relationships, 550
aqueous media, 351, 359, 360, 367, 371
archaebacteria, 235, 236, 238, 243, 246, 247, 251, 253
Archean, 161
ATPase, 254
autocatalysis, 401, 402, 539

Bacillus subtilis spores, 277, 278, 280, 281, 287–290, 292, 293
biogenesis, 395
biomolecule, 201
  chiral nature of, 201
  handedness of, 191, 201, 208, 211
Born energy, 31, 32
  barrier, 21, 31, 32
bromofluoro-1, 4-benzodiazepinooxazole, 539
  conformations, 539, 541–543, 545
  diastereomers, 539–546

calcium phosphate, 335
  precipitated, 336
calcium pyrophosphate, 351, 352, 354, 358, 361
  precipitation, 363
carbamyl phosphate, 335, 336
  elimination of, 337, 339, 343
  phosphorolysis of, 335, 336, 340, 341, 343, 345–348
  synthesis of, 337, 338
catalysis, 48, 49, 51, 125, 129, 135, 347, 348
  alkaline, 89
  dust-driven, 457, 474, 476, 477, 482
  magnesium, 49, 51

mineral, 351
photo-, 58, 59
simple interfacial, 31, 40, 41, 43
catalyst, 219, 220, 375, 376
catalytic groups, 62
cellular automaton, 227
chemical evolution, 431
chemolithoautotrophic reactions, 141, 143, 152
chiral homogeneity, 175
chiral impulse, 201, 204, 205, 207
chiral polymers, 180, 184
chirality, 175, 177, 178
amplification, 180, 184, 194, 197, 403
extraterrestrial, 185, 186, 187
importance of, 175
origins, 178, 186, 187
clay catalysis, 74, 351, 434, 435
cluster, 227, 228
cometary impact environment, 457
cometary dust, 470, 471, 488
comets, 3
conformational steric energies, 541, 543, 544, 546
cooperative binding, 61, 63, 66, 68, 70, 71, 75, 78, 80, 81
cooperative systems, 220
errors in, 220
stability of, 219
cooperativity, 219
cyanate, 335
cystine, 214, 216

deamination, 89
diaminomaleonitrile (DAMN), 61, 78
diastereoisomers, 326, 328, 329
dithiol, 56, 57, 58
DNA topoisomerase, 235, 236, 241
DNA double strand breaks, 277, 279, 282, 284, 286, 287, 288, 290, 292
DNA-protein cross-links, 278, 281, 287, 292
dormant life, 277, 293
dust, 457, 458
cometary, 465, 470, 471
composition, 457, 458, 463, 470
interplanetary, 459, 463, 469
interstellar, 461, 463, 465, 466, 468, 475
volcanic, 459, 462, 465, 474, 483–485

Earth orbit, 277, 293
electron diffraction, 3, 16
electroweak enantioselection, 191, 196, 197
electroweak interactions, 211, 212
equilibrium constants, 378–392
error propagation, 219, 221, 224
extraterrestrial organisms, 178, 185
extreme dryness, 277, 288, 293

fatty acid metabolism, 104
ferric ions, 53, 54
Fischer-Tropsch reaction, 129–131, 480, 482, 484, 485
flavin-adenine dinucleotide (FAD), 75
free energy, 378–392

genetic code, 549, 550, 553, 554, 555, 558, 559
evolution of, 265, 269
origin of, 553, 556, 557, 559, 569, 588
geochemical constraints, 141, 142, 145, 152, 167
Giardia, 260
Gibbs free energy, 141–143, 145, 146, 152, 163, 164, 378–392
glutamic acid, synthesis, 395
glycine, 111–116, 434–440
glycoaldehyde phosphate, 297, 300, 302, 311, 313
glycolic acid, 104

helicase, 241
heterocyclic compounds, 133
hexacyanoferrate (II), 536, 537
homochirality, 191, 211, 213, 214
homoionic clay, 63
horizontal gene transfer, 253
hot origin of life, 235, 236, 244, 251, 257
hydrogen cyanide, and adenine synthesis, 83–87, 90, 92
hydrogen bonding, 83, 92–94
hydrogen exchange, 420
hydrolysis, 83, 87, 89, 96
hydrotalcite, 298, 308, 312, 318, 320, 328

hydrothermal, 417, 418, 424, 427
  environment, 113, 116
    simulated, 113, 115
  organic synthesis, 417
  origins of life, 417, 428
hydrothermal system, 119, 121, 122, 132, 141, 149, 150, 152, 157, 161, 164
  off axis, 119, 120, 134
  simulation, 126
  spreading ridges, 119, 120, 134
hydrothermal vent
  discharges, 111, 112, 157
  temperatures, 111, 116
hydroxy acids, 170
hydroxylapatite, 61–65
  FAD binding to, 75
  nucleoside/-tide binding to, 66, 68
  RNA binding to, 77
hypercycle, 227, 228, 229, 232

ice, 3
  amorphous, 3, 4, 5, 7, 11, 13, 14, 15, 16, 17, 18
  astrophysical, 3, 4, 17, 18
  bulk, 3, 7
  cometary, 3
  computer simulated, 7, 8, 9, 14, 16, 17
  hydrogen bonding, 7
  prebiotic, 17
  substrate, 6, 10
  vapor deposited, 3
    microporosity of, 3, 4, 9–15, 17, 18
  water, 3, 4, 5
impact frustration, 257
interplanetary dust, 457, 459, 463, 464, 469, 487
interplanetary medium, 457, 463, 465, 481
  reactions in, 481–483
interplanetary space, 462
interstellar clouds, 461, 464
interstellar dust, 461, 463, 465, 468, 475
  grain evolution, 458, 474
interstellar grain chemistry, 474, 476, 478, 479
interstellar medium, 458, 475, 487
interstellar space, 462
ion exchange, 532, 533
iron hydroxide, 53, 54, 58

Krebs cycle, 99, 103, 108, 109
  diagram, 108
  reverse, 104

lactic acid, 99, 104
lattice points, oscillation of 230
lattice points, parasites and, 230
leucine, 111–116
low temperature, 214, 215

magnesium ion, 49, 51
Mannich, 131
Mars, 277, 293
membrane, 21, 44
  computer simulation, 24, 26, 40
  defects, 30, 32, 36
  heterogeneous catalysis, 21, 40, 43, 44
membrane-water interface, 21, 24, 26, 28, 30, 32, 33, 36, 39, 41, 43, 44
  permeability, 32, 33, 37, 40
  protobiological, 27, 43
  simple, 26, 27
  structure of, 26, 28
    bimolecular, 26
metabolism, 141
  origins of, 99
meteorite bombardment, 251
microfossils, 259
microspheres, 443–454
mineral, 62, 297, 304, 305
  interlayer, 321, 328
  matrix, 375, 376
  surfaces, 352
  surface active, 304
  synthesis, 309
mineral-induced oligomerization, 297, 327, 332
molecular evolution, 515
mutations, 271, 275
montmorillonite, 61–65, 376, 384, 431–440
  AICN binding to, 78
  DAMN binding to, 78
  FAD binding to, 75
  nucleoside binding to, 66
  nucleotide binding to, 63, 66, 68, 72, 75
    effect of pH on, 72, 73

RNA binding to, 75
MTE (metastable thermodynamic equilibria), 112–117

nitrogen bases, 443, 444, 448–450, 453, 454
nucleic acids, 515, 517, 522
nucleosides, 443–445, 448–450, 453, 454
adsorption, 388

observation, ground and satellite, 469, 472
oligomerization, 300
oligopeptides, 431, 432, 438–441
optical rotation, 213
organics, 3, 112, 119, 121, 122
aqueous, 145
in aqueous environment, 119, 127
reactivity, 127
synthesis, 119, 122, 128–132, 162
origins science, 495, 498–500

parasite, 227, 228
parasite effects, 221
parity violation, 182, 183, 191, 193, 201, 211, 216
parity violating energy, 191, 193, 214
parsimony, 551
peptide formation, prebiotic, 431, 432
peptides, adsorption, 379, 383, 384
phase transition, 202, 203, 211–214
philosophies, 495, 498
phosphate surfaces, 351
phosphorylation, 47
photocatalysis, 58, 59
phylogenetic trees, 271, 273, 274
polydisulfide polymers, 54, 56, 58, 59
polymer synthesis, 53, 58
potassium zinc ferrocyanide, 533, 534
prebiotic
catalysis, 351, 352
development pathways, 62, 78
environment, 177, 178, 180
evolution, 51
organic matter, 3, 18
polymerization, 53, 58, 59
precursor of RNA, 62, 64, 78
synthesis, 83, 85, 92
progenote, 252

prokaryotes, 235, 245, 251, 253, 258, 259
protein evolution, 272
protobiological molecules, 40
protocells, 22, 28
pyrolysis, 417, 418,
pyrolysis, confined, 417–427
pyrophosphate, 335, 337, 344

quasi-equilibrium, 111, 112, 113

racemization, 401, 402, 404–413
reduction of hydrocarbons, 420, 424
reductive carboxylation, 99, 103, 104, 105
replicator, 83
ribozyme, 515, 516
RNA world, 219, 221, 241, 243, 515, 516, 517, 526
Rothemund, 130

science education, 495, 496, 502, 503
science literacy, 495, 496–498
scroll ring, 227, 232
second order asymmetric transformation, 402
selectivity, 205, 206
self-replication, 515, 522, 526
signature motif, 568, 570, 574, 575, 578, 580, 581, 585
signature sequence complementarity, 570–580, 586, 587
silica, 375, 376, 385, 386, 391
silicates, 466, 468, 469, 472, 476, 485
solid matrix, 357, 359, 360
space vacuum exposure, 284, 285, 292
specificity, 454
spiral, 227, 229
spiral, parasite and, 229, 230, 232
spontaneous resolution, 402, 403, 539
stability of self-replicating systems, 219
Strecker synthesis, 128, 129, 131, 161, 162, 164, 170
submarine hydrothermal fluids, 111, 155, 157
sugar phosphates, 297–332
formation, 321
sugar stabilization, 328
sulfur, 141, 145, 147, 152
oxidation, 145, 147, 152, 153, 154

sulfur compounds, 119
supercritical water, 127
Supernova, 201, 207
surfaces, 443, 447, 450, 453
symmetry breaking, 179, 191, 197, 198, 201, 202, 207, 208, 401, 539
synthetic pathways, in aqueous solution, 398

thermodynamics, 144, 147, 161
thermophiles, 142, 145, 235, 236, 244, 257
  hyperthermophiles and DNA, 236, 243
  hyperthermophiles and origin of life, 236, 242, 244
transamination, 102, 103, 104, 105, 108
transfer RNA, 549–553, 559, 560, 565, 569, 587
transition process, 202
transphosphorylation, 335, 336, 352
transport, 485, 488
  ion, 25, 30–33, 36, 37
  membrane, 27, 38
  molecular, 36, 37
  passive, 21, 25
  protobiological, 37
  proton, 30
  rate of, 32, 36
trimetaphosphate, 47, 51

vapor deposition, 4, 5, 6, 7, 9–18
simulation, 5, 7, 8, 9, 10, 12, 14
vents, submarine, 111, 152, 155
vesicles, 21, 22
  protobiological evolution, 21, 31
volcanic dust, 459, 462, 465, 474, 488

water
  liquid, 5, 7, 9
  molecules, 5, 6, 7, 9, 10, 14, 16–18
    kinetic energy of, 10, 18
    thermal energy of, 7, 10, 11
  substrate, 6, 18
weak force, 191, 192
Western scientific materialism, 499, 504, 505
Wohler synthesis, 128, 129

zinc ferrocyanide, 531–536
  ammonium uptake, 532
